

xpressions

suggested shelving weight limits

How does the Xpression shelf work?

shelves rest on the top inside of the frame hubs. Shelves on the floor level are resting on top of these frame hubs and are not directly on the floor, but slightly above.

* Xpressions shelves have been weight tested in accordance with the framework support beams. The shelves are not suitable with the framework to support a television, computer monitor or other heavy electronic devices. Weight limits exceeded are done so at the users own risk.
